

HHS DR
Architects/Engineers

Higher Education

HHS DR partners with our clients to sustain their success!

We are an experienced, regional leader in facility design and construction administration for the education, government, and private sectors.

HHS DR is annually ranked #1 by the Pennsylvania Builders Exchange by volume of projects in design or under construction.

We build long-term relationships with our clients, providing them with responsive, high-quality service.

HHS DR utilizes cloud-based technology to manage projects effectively out of our offices in Sharon and downtown Pittsburgh.

Our talented staff remains current with changes to codes and design standards, and integrates technology with a personal touch to add value to our clients' projects.

HHS DR's design and project management capabilities are substantial.

In 2018, we will design, bid and administer millions of dollars of construction in Pennsylvania and Ohio for:

- Major equipment replacement;
- Capital improvements (such as roofs);
- Additions to existing construction;
- New construction;
- Repurposed space to meet client needs.

Building Relationships since 1953.

HHS DR
Architects/Engineers

We use technology efficiently to produce solutions and facilitate client and peer communication.

We *do not* use technology as a substitute for personal service, face-to-face communication and being present on the job-site or in meetings with our clients.

We Build Relationships.
